

Balfour Dermatology

OFFERING RELIEF AND REJUVENATION
FOR FEMALE INTIMATE HEALTH

Balfour Dermatology is the East Bay's premier skin cancer detection and treatment center. For nearly two decades Dr. Beer and our team at Balfour Dermatology have been providing East County residents with full service skin care, healing, and rejuvenating procedures and products. We treat all skin-related aesthetic and health concerns in men, women and children of all ages. In this article I want to share with you a new revolutionary treatment we offer that relieves, restores, and rejuvenates female intimate health, an issue that many women struggle with as they grow older.

We can see the damage that the normal aging process has on the exposed parts of our skin like our face, chest, arms and legs. However, the passage of time inflicts the same kind of harm on skin covering areas of the body that we are unable to see. Many women of all ages also experience changes in the body following pregnancy and childbirth affecting bladder control. Fortunately, at Balfour Dermatology we now offer a new, effective, non-invasive, and painless vaginal rejuvenation procedure called Exilis Ultra Femme 360.

Ultra Femme is a quick, comfortable treatment giving an overall warm sensation, which some patients describe as relaxing and even pleasant. The entire process takes less than 15 minutes. It is tailored to the circumstance and condition of each patient in order to provide maximum results. There is no recovery period or downtime; patients can immediately return to regular activity. We recommend a series of three weekly treatments. Many patients experience an immediate improvement following their first session with peak results continuing to appear following their final treatment.

Exilis Ultra Femme 360 achieves its amazing results through precisely focused radio frequency energy that stimulates the production of collagen, which is a protein that forms strong fibers the body uses to connect tissues together. As a result, the additional collagen increases circulation and tightens the tissues generating a fresh healthy quality in the patient's intimate area.

CORE DERMATOLOGY SERVICES

Balfour Dermatology started as a vision to bring quality dermatology to the East Bay. Dr. Beer is fellowship-trained in MOHS surgery, a specialized skin cancer surgery. His vision brought a 99% cancer cure rate to the East Bay's farming and recreational areas, which are high in sun exposure and incidence of skin cancer. Balfour Dermatology diagnosed over 1,000 cases of skin cancer last year alone! Along with our cancer specialty, Balfour Dermatology diagnoses and treats the full range of skin conditions including acne, rosacea, eczema, psoriasis and rashes to name a few. The vision has grown to include cosmetic treatments as well.

We are proudly rated top 3% in the nation for our cosmetic injectable procedures. We focus on giving our patients natural subtle correction, softening the signs of aging and treating the skin from head to toe. We employ cutting edge technology and techniques offering the latest procedures available for both medical and cosmetic concerns enabling us to give our patients the best quality of care. We offer alternative treatment options for many conditions such as light therapy for psoriasis management.

We have a full range of clinically proven physician-dispensed skincare products

that are available for purchase in our office as well as on our website.

We pride ourselves in educating our patients on proper sun protection giving you the tools to protect your skin to remain skin cancer free and minimize the aging effects of the sun. Wear sunglasses, a wide-brimmed hat, sun protective clothing, and seek shaded areas whenever possible. Use a good full-spectrum sunscreen daily whether you're in the sun or inside. Did you know, tanning beds increase your risks of skin cancer by 74 percent? Have fun in the sun but be safe and use your sunscreen daily.

Regularly check the condition of your skin for signs that might signal the onset of skin cancer including changes in the size or color of moles and beauty marks, unexplained bleeding, itching, or newly developed spots. An annual skin check-up enables us to discover and treat any abnormal developments that are often easily corrected if caught early. People with lighter skin types and a family history of skin cancer, especially melanoma, are at increased risk of skin cancer. Children in families with these conditions should begin annual skin checks at an early age. Even darker skin types can develop skin cancer. Patients are always surprised to hear that Bob Marley died of skin cancer.

We're here to help! Contact us for any questions, issues, or for any skin care services that we might provide. Check us out on our website at www.SkinQuestion.com as well as follow us on Facebook for the latest news and developments at Balfour Dermatology.
